

National Library Implementation - Sweden the last year

Harriet Aagaard
BIBFRAME Workshop in Europe 2020

Libris: Services/Cooperation/Catalogue

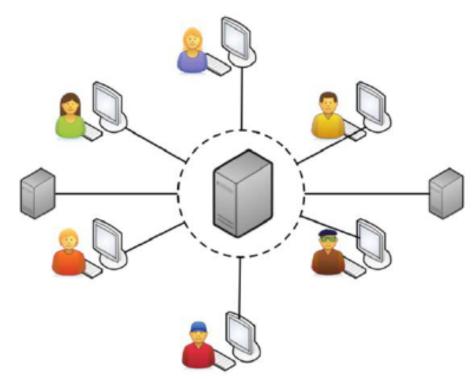

500 libraries: national library, university libraries, special libraries, public libraries

- A centralized National Union Catalogue.
- Data is collaboratively edited.
- A publication is catalogued only once.
- Other libraries only need to register a holding.
- Records exported to each local library system.

Built on principles of openness and cooperation.

Includes the Swedish national bibliography and authority file.

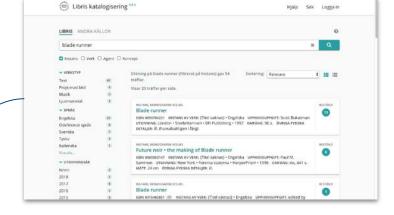

Libris Public OPAC, ILL, etc.

The cataloging interface

- A web application to administrate bibliographic information, holdings and authorities.
- An unfiltered window into the Libris data.
- Not a tool for
 - □ discovery
 - circulation

8 releases since last year

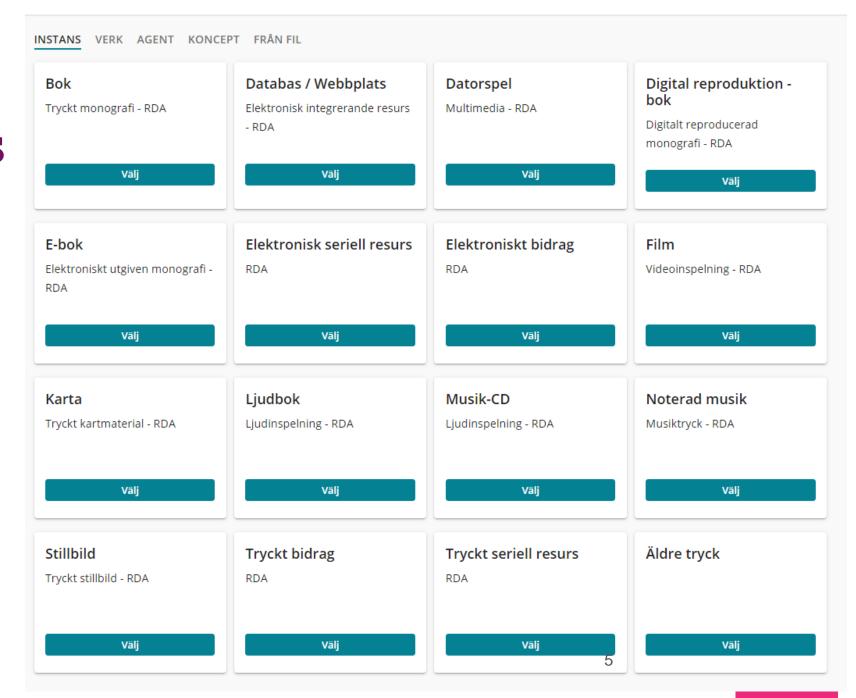

- 1.11 September 2019
- 1.19 September 2020

- New features
 - More profiles / templates
- Data normalization
- Implementing works
- Export functions less irrelevant details
- User interface improvements
- etc

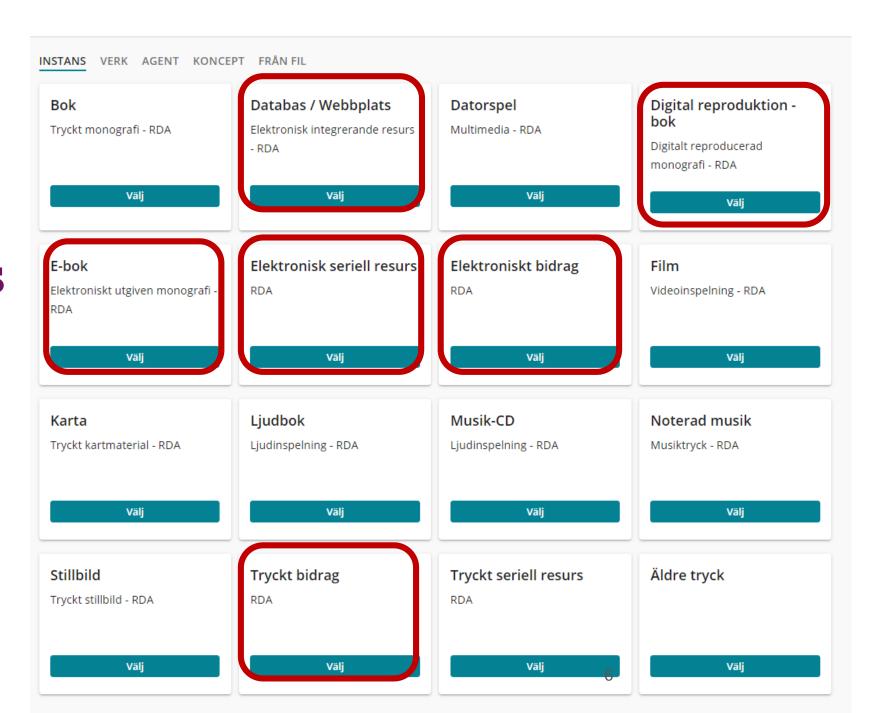

Profiles – templates

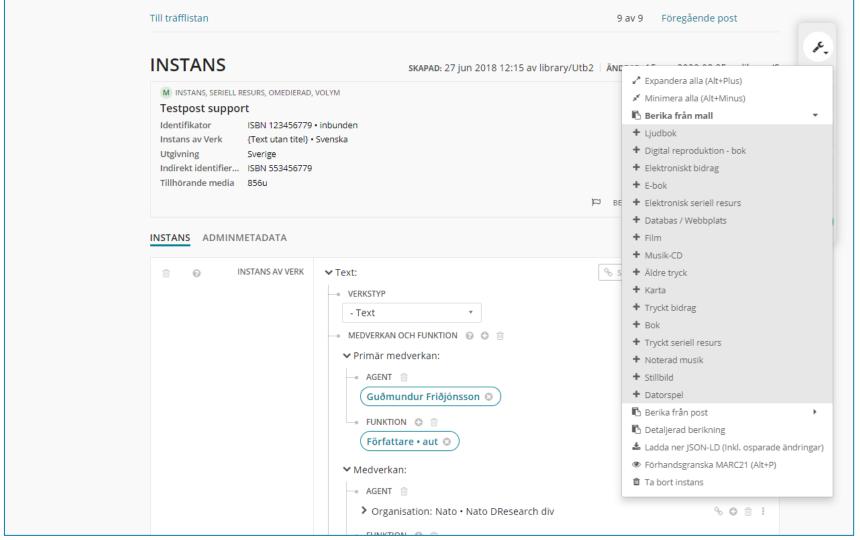

New

Profiles – templates

Enrichment from templates

Data normalization

Last year:

- Normalizing all this data and adjusting dependent behaviour by using the features of linked data is an ongoing challenge, which we've only begun to address. (Niklas Lindström, 2019)
- Codes (languages, countries, relator codes)
- Types (instance types, work types) bf2:Print not in marc
- Cleaning up marc21 types: projectedImage = both stillImage and movingImage

Data normalization continued

- Control fields (000, 006, 007, 008)
- Link entries
- Genre/form, Subject headings, Agents
- Necessary indicators in MARC21 exported automatically (041 ind1)

If translationOf => 041 ind1=1
If not => 041 ind1=_

Reduced "PlanB"

```
"249": {

"NOTE:Local": "LIBRIS-definierat fält, OBSOLET",

"addLink": "marc:hasBib249",

"resourceType": "marc:Bib249",

"i1": {"property": "marc:sequenceOfWork", "marcDefault": " "},

"i2": {"property": "marc:nonfilingChars", "marcDefault": "0"},

"$a": {"property": "marc:originalTitle"},

"$b": {"property": "marc:titleRemainder"},

"$n": {"addProperty": "marc:titleNumber"},

"$p": {"addProperty": "marc:titlePart"}

},
```

Instance -> Work /hasTitle

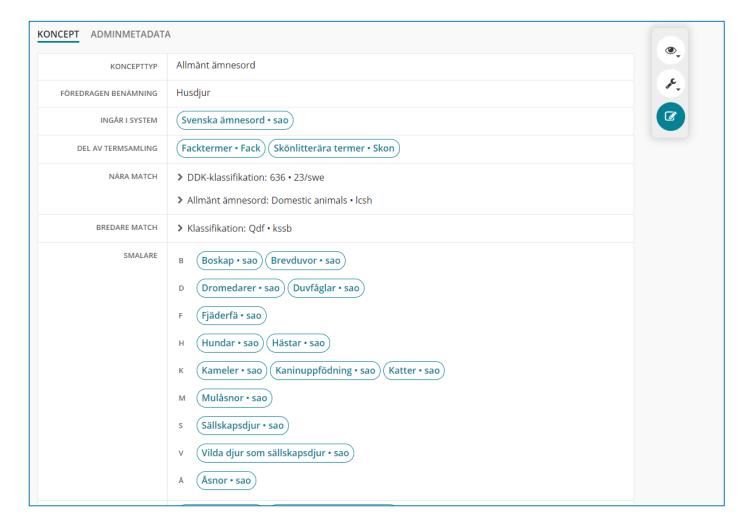

Export to MARC21: marc 240, or marc 7XX / ind2=2.

Reverse

- Broader narrower
- Husdjur (Domestic animals)

Better quality, less repetition of data, less work

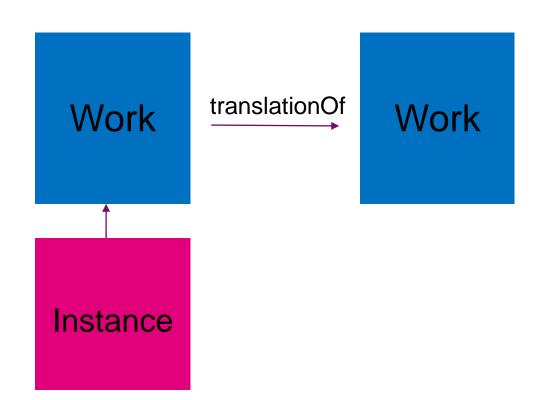

Works

- Modelling!
- Conversion from MARC21 and back to MARC21
- Move entities from Work to Instance or from Instance to Work
- Clustering of identical works; almost identical Swedish text works
 - Pragmatic view usefulness
 - According to RDA

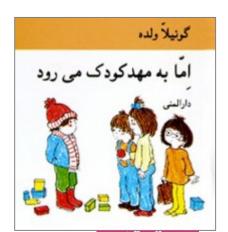

Work model
