

Sinopia & FOLIO: Bridging the gap to linked data cataloging

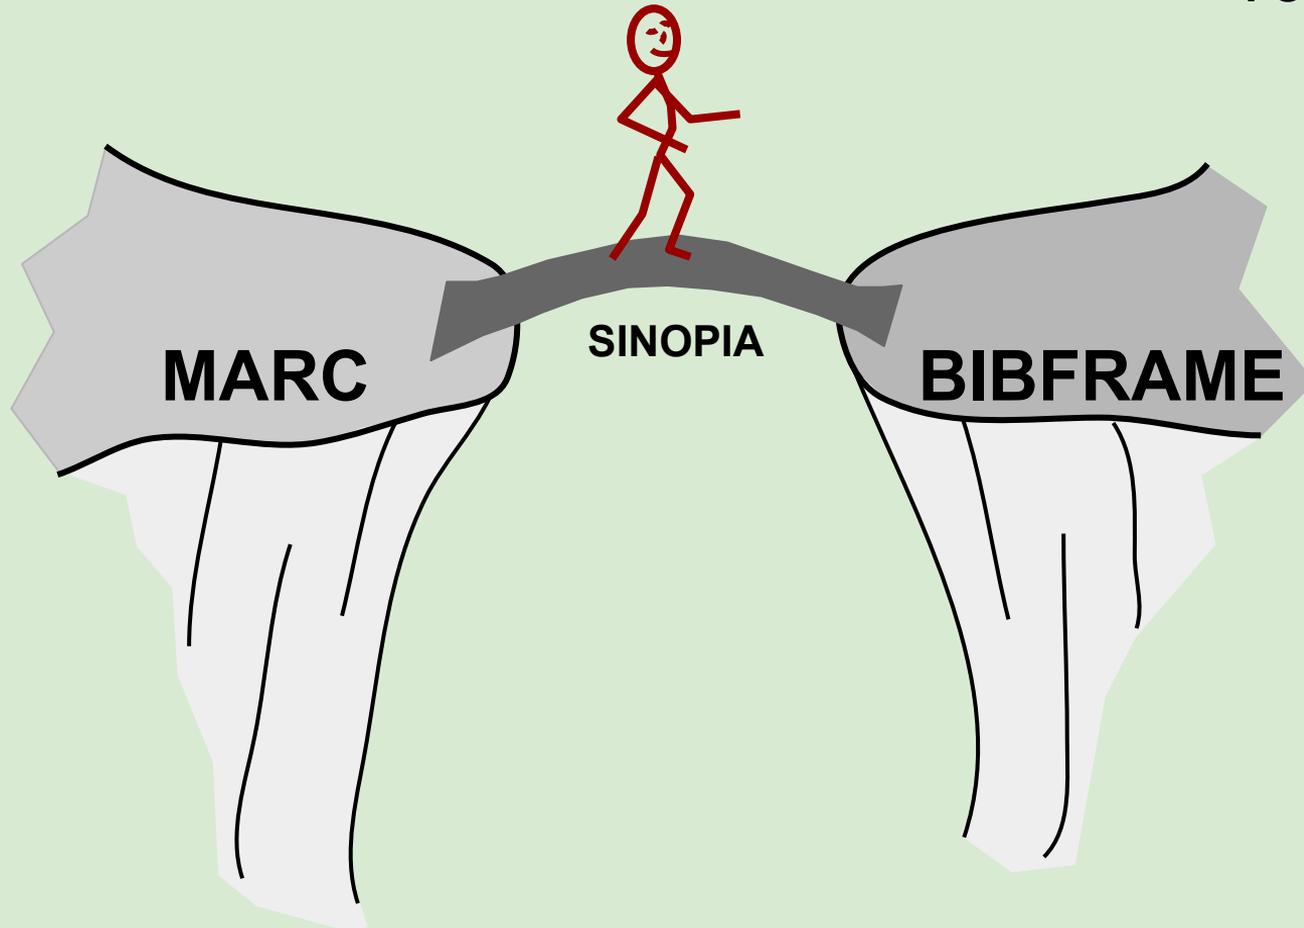

Jason Kovari (Cornell University), **Simeon Warner** (Cornell University), Philip E. Schreur, (Stanford University), Tom Cramer (Stanford University), **Michelle Futornick** (Stanford University)

BIBFRAME Workshop in Europe 2021, September 22

LD4P3 | Linked Data for Production: Closing the Loop

MARC

SINOPIA

BIBFRAME

Cornell Vision for Sinopia & FOLIO

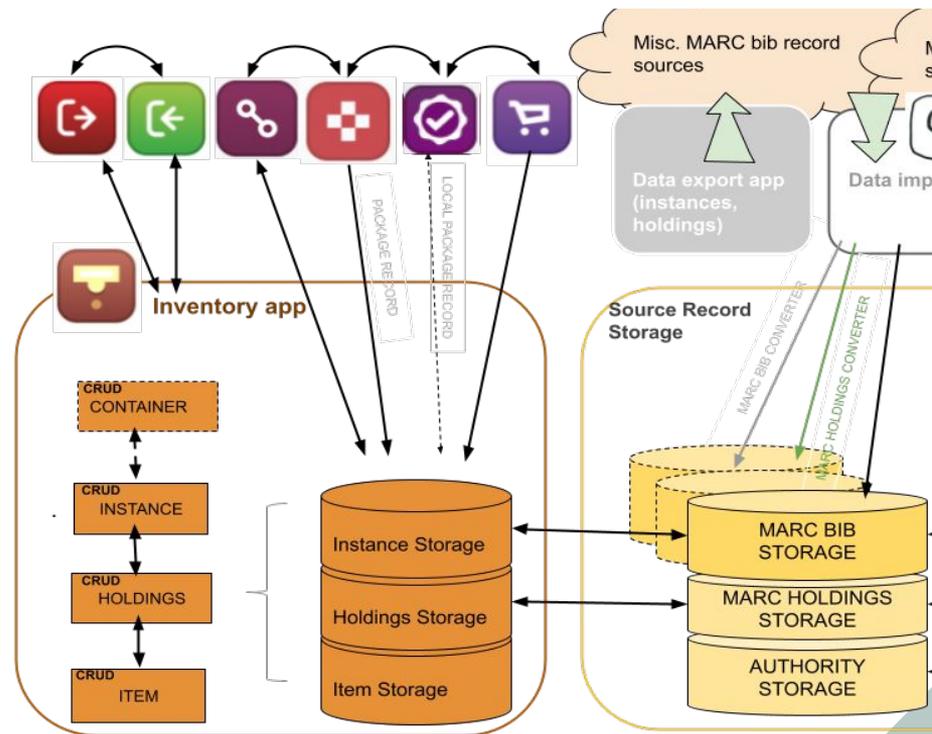

- LD4L and LD4P partner
- Work on authority lookup (Questioning Authority) for Sinopia RDF editor
- Work on leveraging linked data to improve discovery
- Long-time partner in FOLIO collaboration
- Live with electronic resource management (ERM) in 2020
- Launched full FOLIO implementation July 2021

FOLIO + Sinopia = Path to maintain a portion of our catalog in BIBFRAME without separate systems or extra operational records. Appealing gradual migration options

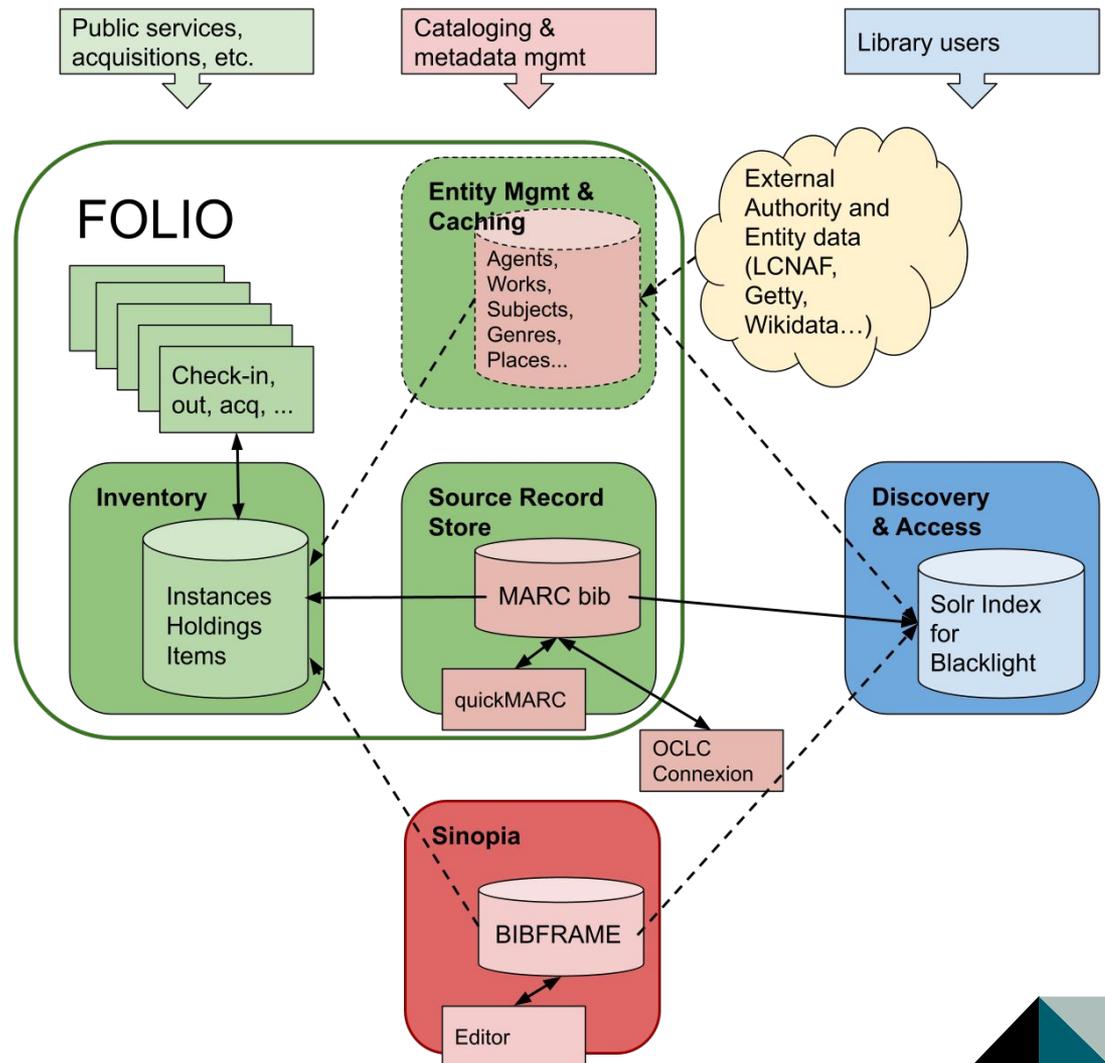

FOLIO - The Future of Libraries is Open

Open-source LSP architecturally ready for multi-format catalogs:

- Key apps interact with Inventory app (Instance, Holdings, Items)
- Inventory kept in sync with Source Record Store
- MARC store implemented
- **Sinopia will provide BIBFRAME store and edit**

FOLIO with Sinopia, Entity Management, and feeding Discovery

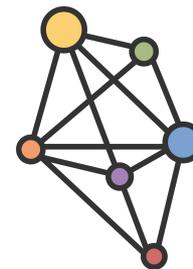

Sinopia Goals

Allow librarians and other metadata creators to:

Get started quickly with creating linked data, without needing tool setup

Explore cooperative cataloging in a linked data environment

Develop best practices related to linked data creation

Contribute feedback and expertise to tool development

SINOPIA

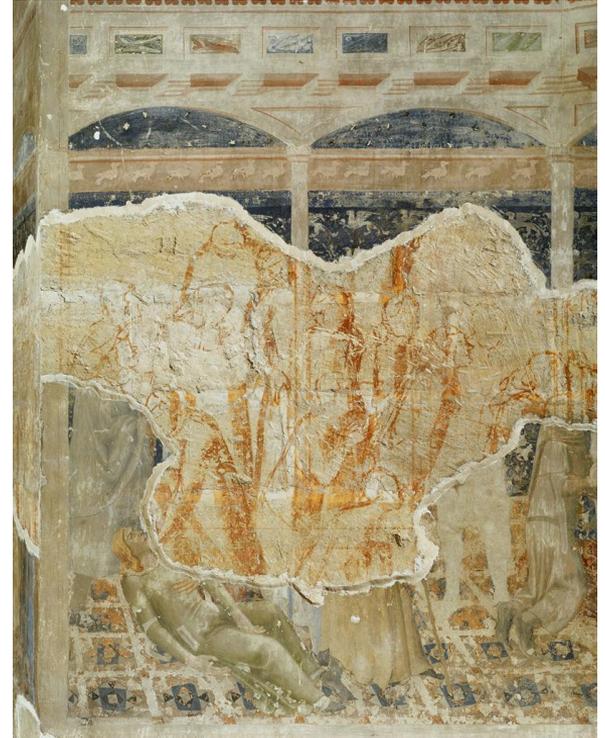

Behind the name

“The **preliminary drawing** for a fresco or mural, named for the reddish-brown pigment traditionally used to draw or transfer it.”*

Sinopia is a **sketch of what's possible** on the way to a full-fledged linked data production environment.

Who's using Sinopia?

Political Map of the World, February 2021

AGRESTALIA Independent state
Berthuda Dependency or area of special sovereignty
Scale (kilometers) Island / island group
National capital
Other capital
Scale (miles/kilometers)
Source: CIA World Factbook

- About 800 unique users mainly from North America (English UX currently)
- Less than 10% from Europe
- 17 European countries represented: Austria, Belgium, Croatia, Denmark, Finland, France, Germany, Hungary, Ireland, Italy, Netherlands, Norway, Poland, Spain, Sweden, Switzerland, UK

Metadata activities

Create and manage
external entities

Acquire materials
and metadata

Create bibliographic
metadata

Sinopia

Discover and
borrow resources

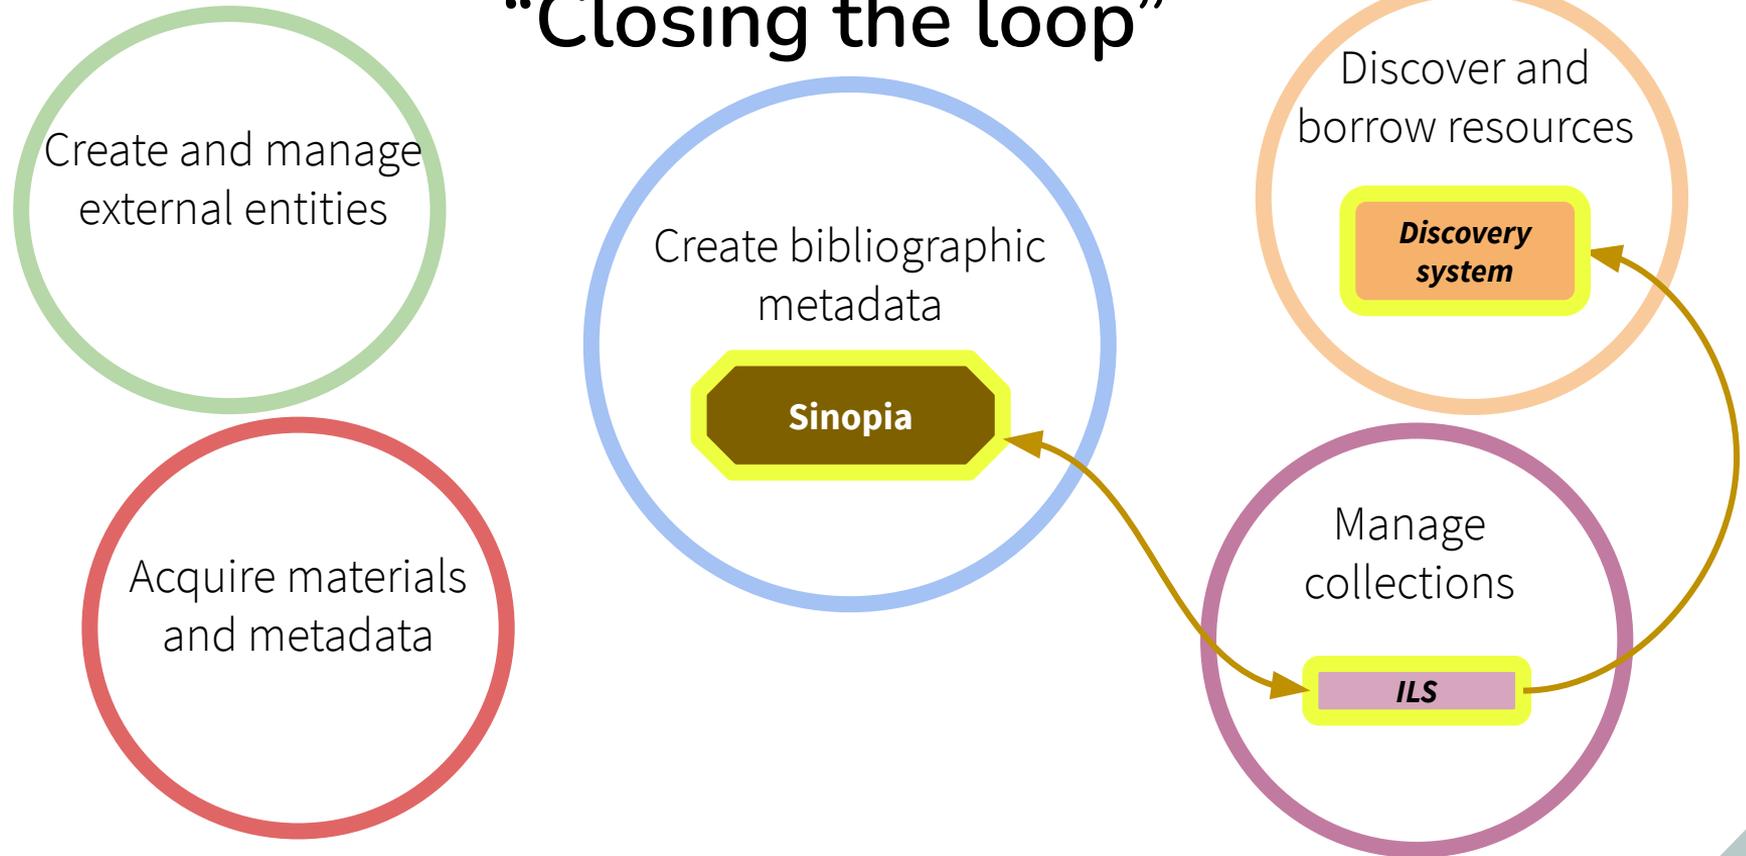

**Discovery
system**

Manage
collections

ILS

SINOPIA

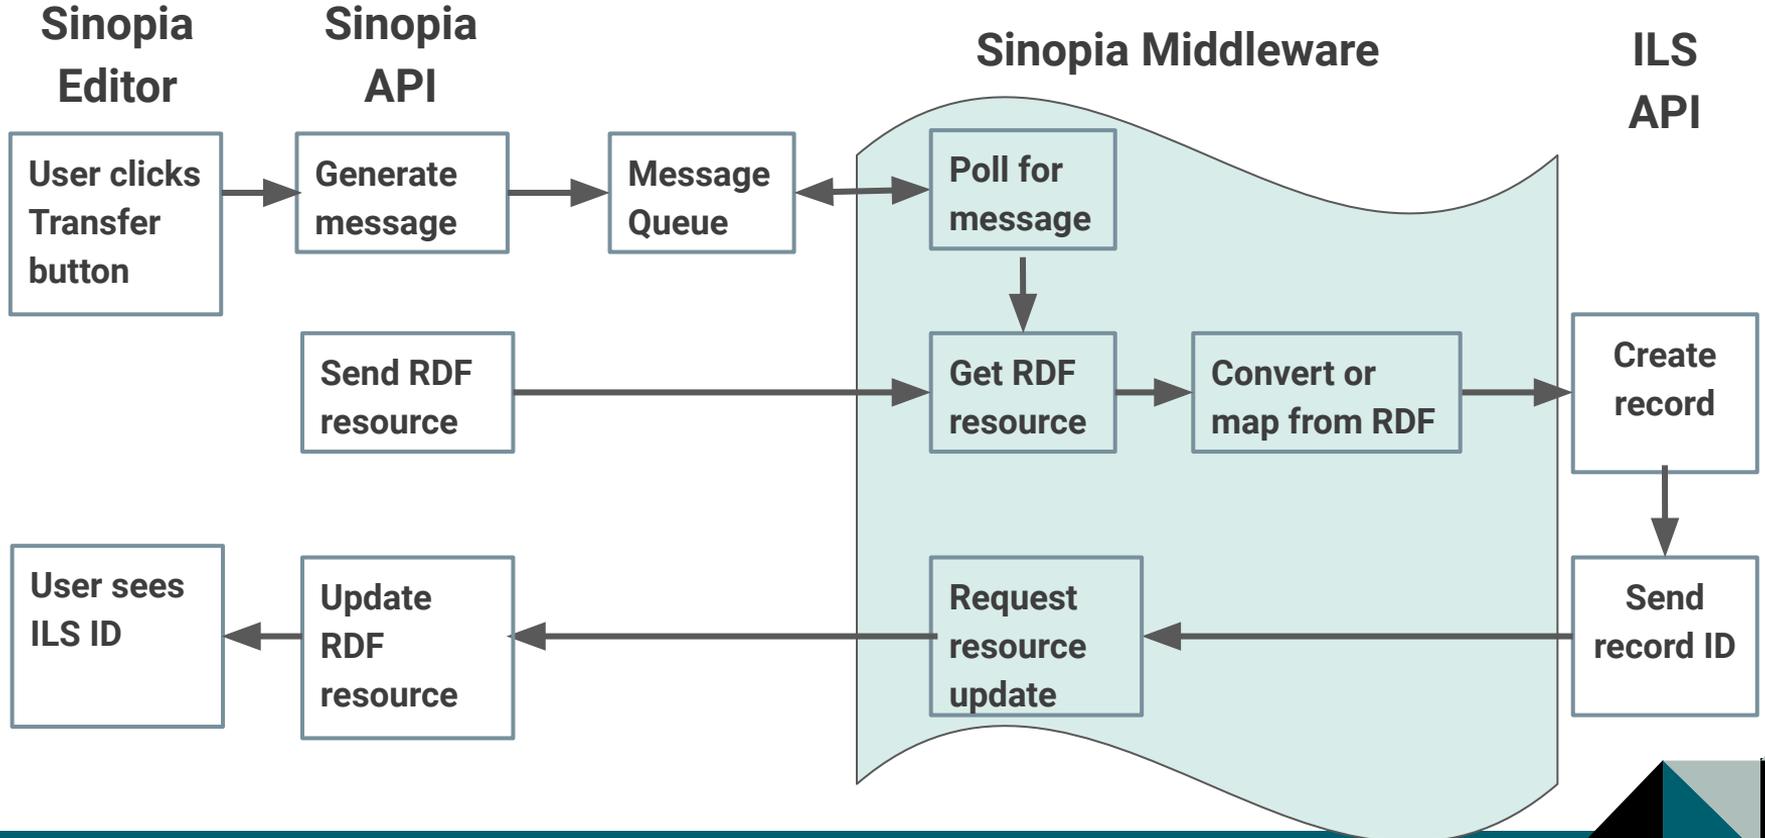

“Closing the loop”

Sinopia + FOLIO = Sinolio

- **Proof-of-concept** of connecting Sinopia metadata creation with ILS activities
- Sinopia and FOLIO compatibility
 - open source
 - similar technologies
 - FOLIO does not have RDF cataloging tool natively
- Build Sinopia **Middleware** to create an integration that can be applied to other ILSs

Sinopia Middleware

Sinolio ETL Workflows

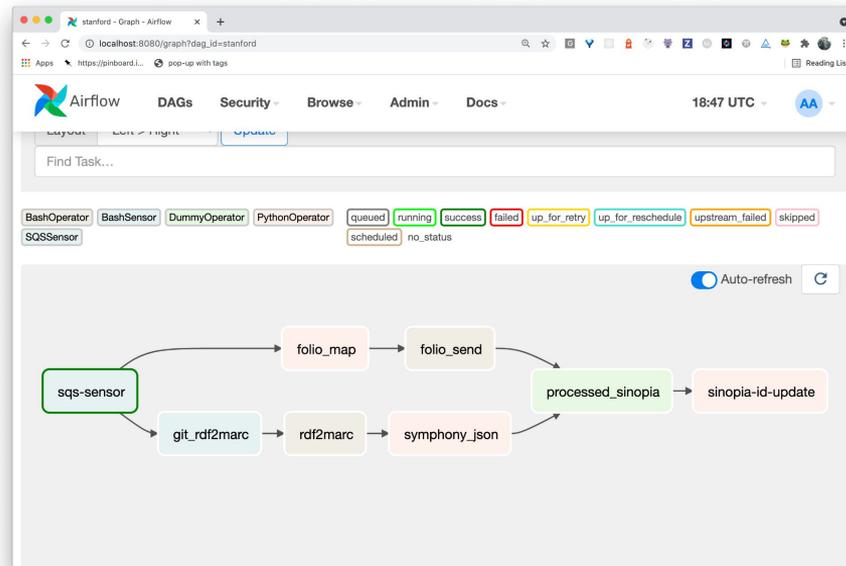

- i. **Extract** RDF from Sinopia
- ii. **Transform** into FOLIO Inventory Records
- iii. **Load** through Okapi API

Apache Airflow:

<https://airflow.apache.org/>

Sinopia ILS Middleware:

<https://github.com/ld4p/ils-middleware>
