

BIBFRAME-based SVDE ontology

[BIBFRAME Workshop in Europe 2022](#)

Jim Hahn (University of Pennsylvania)
Tiziana Possemato (@Cult and Casalini Libri)
Anna Lionetti (Casalini Libri)

Where we stand and a look ahead

Major achievements since September 2021

Release of **Share Family tenants** (beta version): Kubikat-LOD, Natbib-LOD, PCC-LOD

New release of the Entity Discovery Portal 2.0 supporting an enhanced CKB, including (among others):

Instance as entity

Default simple search configuration

Skin portals supporting features specific to the individual skin (e.g. the [British National Bibliography skin](#) within the [Natbib-LOD tenant](#))

Initial version of **Subject management**, including various subject schemes (e.g. National Library of Finland subjects) linked subject strings and the display of concepts

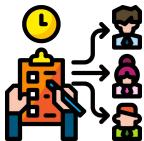

Major achievements since September 2021

New system infrastructure migrated to **AWS - Amazon Web Services**

Start of developments of **J.Cricket Entity Editor**

In progress: refinement of **project coordination**
(e.g. aggregated release notes, issue tracking system)

Iterations of clustering process on svde.org: currently approx. 73 MARC authority and
bibliographic records processed and approx. **139 millions entities created**

now online: Duke University, Library of Congress, National Library of Finland, National Library of Norway, New York University, Smithsonian Institution, Stanford University Libraries, University of Alberta, University of Pennsylvania

Goals for the next future

2022, Q3-Q4

J.Cricket developments

Back-end: planned to be completed in October.
Front-end: end of back-end feature + ≥1 month. Features are being developed one by one, to enable testing iterations

2022, Q3-Q4

Change management module

AKA "delta update" module, to enable regular imports of MARC records for continuous update of SVDE data

2022, Q3-Q4

RDFizer (evolution of the LOD Platform RDF conversion tool)

It will support (among others) the import of Sinopia data to close this loop

2022, Q3-Q4

Third parties' tools and protocols

Tools/Protocols for third parties' usage and data harvesting
Including APIs, OAI-PMH, Atom feeds and Activity stream

2023, Q1

Share Family Index

Set-up of interconnections among tenants

2023, Q1

Item as entity

Creation of entity clusters of items

Continuous enhancement of the Share Family Entity Discovery Portals

First part: context on BIBFRAME data creation in SVDE

Interoperability - The Share-VDE entity model

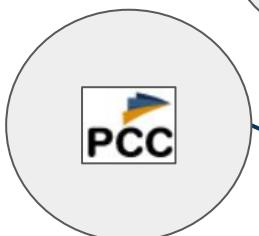

- The Share-VDE entity model is based on the BIBFRAME ontology, integrating it in its original form to represent entities found in classic MARC encoded records.
- There are exceptions when it comes to representing information that is not expressed in BIBFRAME, or that has not been translated from MARC to BIBFRAME, or that needs further modelling to allow for improved discoverability with the SVDE catalogue.
- Share-VDE might apply extensions to the entity model to support such cases: a typical example is the creation, identification and modelling of the svde:Opus (that is, in Share-VDE, *the highest level of abstraction of a creative work*).
- This results in a "*BIBFRAME-based SVDE ontology*", that is the standard BIBFRAME ontology extended in specific cases to support interoperability with various models (e.g. IFLA LRM), at the same time retaining compliance with the standard BF.

Sapientia Entity Identification WG

The [SEI WG](#) reviews use of entities, identifiers, and associated modelling in the Sapientia CKB; reviews and refine processes for Sapientia entity clustering in Share-VDE and the creation of associated open and stable URI for use in Share-VDE and the library community; reviews MARC to BIBFRAME and BIBFRAME to MARC conversion; engage with the library community to identify and/or develop best practices for use of Sapientia identifiers in BIBFRAME and MARC data.

Latest outcomes: svde:Instance as entity

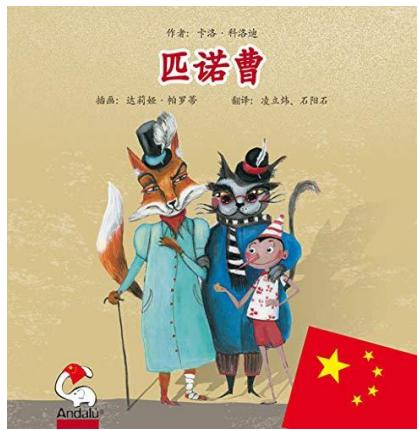

- 4 layers in [SVDE entity model](#): svde:Opus | svde:Work | svde:Instance | svde:Item;
- svde:Opus and svde:Work are types of bf:Work → this ensures interoperability;
- consolidating the definition of svde:Instance entity properties;
- review of clustering and conversion rules.

Focus on entity model

Share-VDE as a BIBFRAME node to put BIBFRAME into practice:

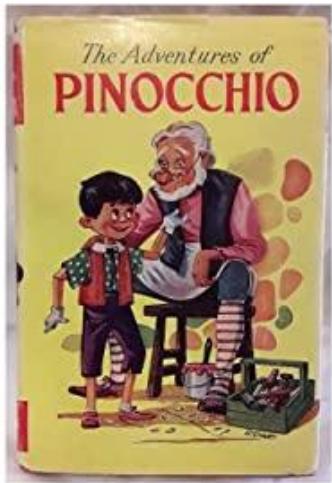

- Share-VDE provides enriched data that is interoperable with other BIBFRAME nodes and with other models;
- the Share-VDE working groups have reviewed algorithms and processed, and expanded the BIBFRAME model to meet real-world needs;
- focus on cooperation also in the IFLA context: the mapping UNIMARC-BIBFRAME is being prepared and a formal liaison with SVDE has been approved by the IFLA Bibliography Section Standing Committee.

PCC BIBFRAME Data Exchange Meeting

held online September 9-10, 2021

<https://www.loc.gov/aba/pcc/bibframe/PCC-BIBFRAME-Data-Exchange-Summary.pdf>

This meeting established two temporary working groups:

- Use Cases working group chaired by Philip Schreur (Stanford) that delivered its report in December 2021
[Use Case Working Group Final Report](#)
- Data Exchange working group chaired by Nathan Putnam (OCLC), in course

and one permanent group:

- PCC BIBFRAME Interoperability Group (BIG)
<https://www.loc.gov/aba/pcc/bibframe/TaskGroups/BIG/BIG-TOR.pdf>

OCLC & Casalini - Data Exchange Collaboration

for PCC's quality data collected and received in MARC21 from OCLC, processed and distributed in BIBFRAME by SVDE.

How the svde:Opus works on the discovery portal

ShareVDE BETA ← László Krasznahorkai search Search all content... Options ▾

Person László Krasznahorkai

Hungarian novelist and screenwriter. Born in 1954 in Gyula (Hungary).

László Krasznahorkai is a Hungarian novelist and screenwriter known for difficult and demanding novels, often labeled postmodern, with dystopian and melancholic themes. Several of his works, notably his novels *Satantango* and *The Melancholy of Resistance*, have been turned into feature films by Hungarian film director Béla Tarr. – [Wikipedia](#)

Keynote

Location

Type

In case we were to relate the instance-as-entity to every description that contributed to its creation, we would not have in the standard BIBFRAME a proper property (something like "has a description"): this is one of the cases where an extension it's necessary

Share-VDE Ontology

Share-VDE 2.x

Share-VDE 3.x

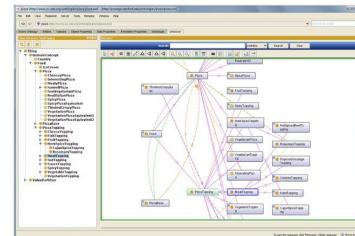

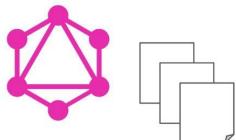

Dictionary tables

- provide **minimal** information about **types** and **properties**
- provide **redundant** information about **types** and **properties**
- are used in **queries** (**building** and **validation**)

- define **properties ownership**
- define **domain**, **range**, **cardinality** information
- define minimal **semantic relationships** like **inverseOf** and **singular/plurals** forms
- allows to associate comments to a property

svde.owl

The RDFizer tool: how data is handled to become BIBFRAME data

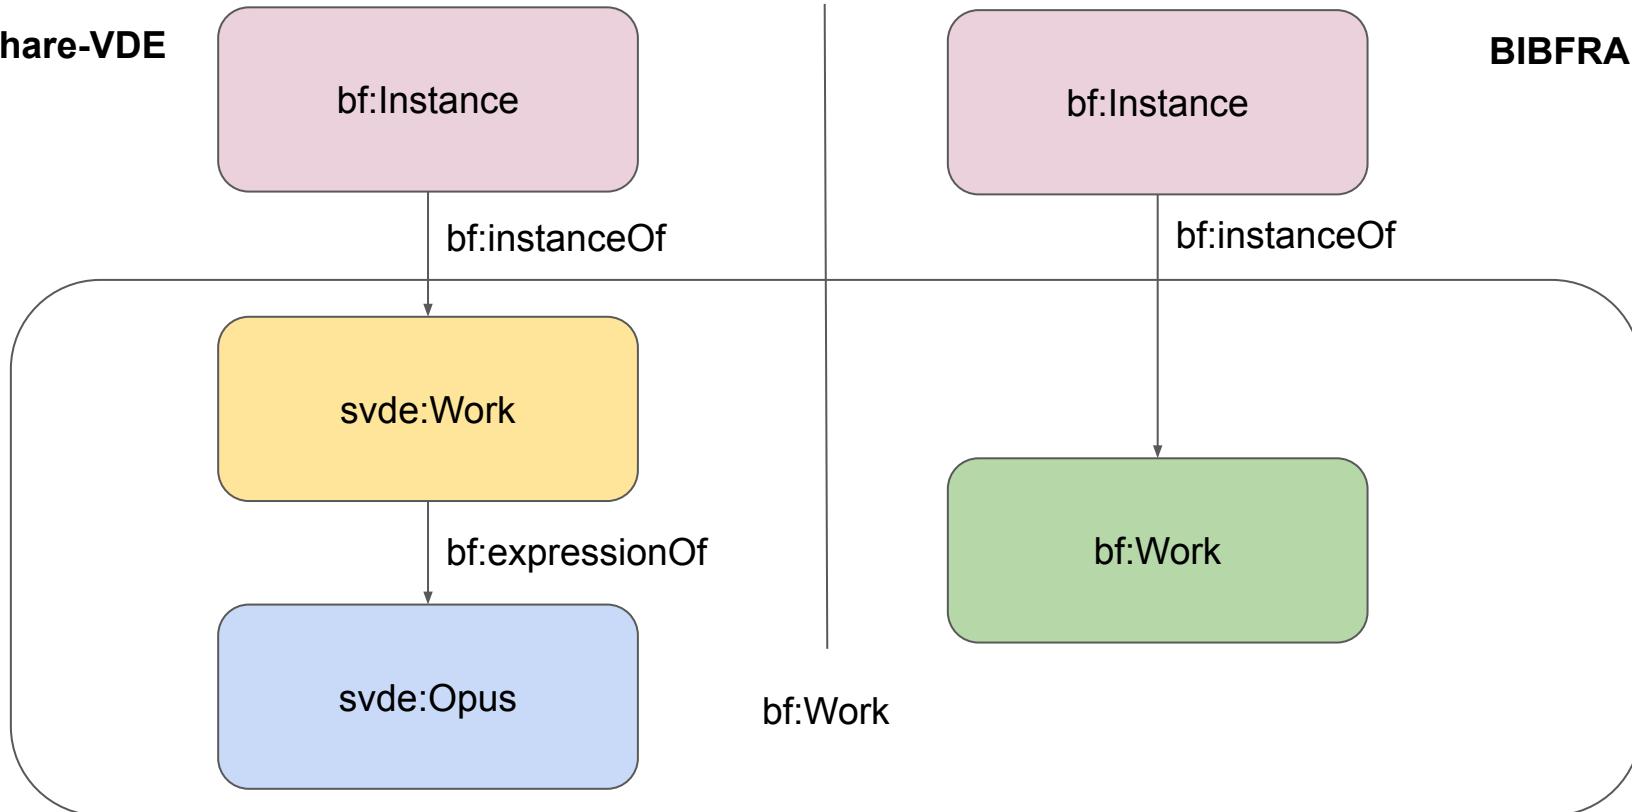

RDFizer tool is in charge of converting data in RDF, using ontologies such as Bibframe 2.0, MADSRdf, RDA, to produce N-Quad files output. It is based on Hadoop Map Reduce framework.

The conversion process is based on Library of Congress Conversion specifications (published on [Bibframe website](#)), adapted for ShareVDE model.

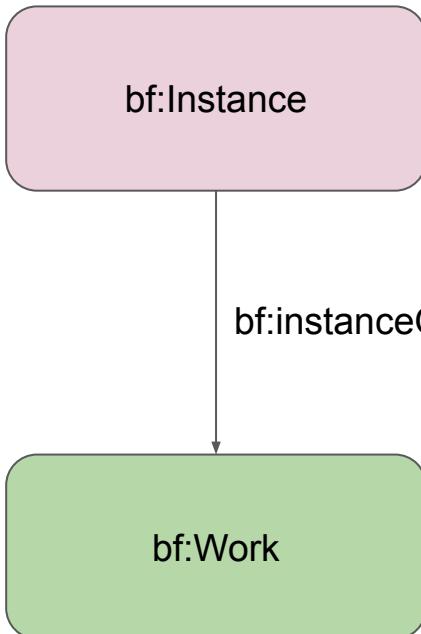

Currently we are working on updating our mapping to incorporate recent LC specification update (from version R2 to 1.7/2.0)

Difference between models

```

Conversion pipeline

The tool accepts two kinds of input:

- **CKB data** (data obtained by the clustering process)
- **Enriched Marc21 records** (the records from every institution, enriched with entities created during clustering process)
